Language: English

Class: 9B

1st

School: New Era Senior Secondary School, Vadodara

Topic: Contribution of Schools towards Sustainable Future.

Schools: The Guards of a Secured Future.

As said, children are the building bricks of a country's future. What is sown in these saplings, returns to the country's economy and development as finished monuments. The place where these children get trained, is a school, or vidhyalaya as you say: the 'House of education'. As the world today is moving towards being sustainable to secure ~~this~~ the youthful future of young brains, their second home has started contribute to this tremendous solution with profound branding ~~is~~ turning ~~the~~ their possibility of being an asset into ~~a~~ a confirmed ~~asset~~ one.

Schools have been a part of our ~~at~~ lives since age 3. The ~~max~~ maximum of one's life is given to one from his/her school. Apart from education, what it teaches us is life-skills and a dream to do something for ~~the~~ our adulthood and ~~the~~ our country. We all have been shown a dream in our schools, either about being an engineer or a doctor but it's not just about the profession, it is about how we contribute to it. Trying one's best to develop something which would be sustainable ~~and~~ is an engineer dream these days. Schools ~~are~~ ^{are} trying their best to impart knowledge about ~~such~~ realistic problems which the generation has started facing and will be affected by it in the future. (Similarly schools are trying their best towards a sustainable future for the country.)

~~But~~ But how does a school contribute to a sustainable & a reliable future? It does by ~~inheriting~~ passing the correct ~~knowledge~~ knowledge and platform. Today, science textbooks not only ~~show~~ showcase ^{about} force and atoms but also go towards sustainability and reliable solutions using ~~these~~ those topics. Special platforms are provided for students to discuss their views on ecosystem and environmental degradation and competitions ~~are~~ are held for students to keep their tubelights switched on always. Discussions, debates, and seminars held for students help them get a better knowledge of the world beyond their neighbourhood and open up their creative self. Some schools have given a room for the students to let their ~~own~~ ideas come to reality like the Atal Tinkering Labs and STEM • classes.

A very fruitful work done by the schools has imposed a sense of satisfaction in the people that the future of ~~this~~ India is going to be sustainable and reliable with Junior Einstein's breaking records ~~in~~ all over the world. Making the nature happy and ~~glamorous~~ glamorously sparkling with colours ~~will be~~ is the motto of all the developing minds these days. Schools have contributed and teachers have too. The working force of schools have left no efforts go into vain. ~~and~~ Every single ~~word~~ word spelt ⁱⁿ and every single act taken ~~by~~ by the schools has contributed to the future. Thus, by the term a 'sustainable future', ^{we} means giving a safe and secure future to the next generation and training them towards sustainability instead of dependance. To conclude, as the time ~~passes~~ runs ahead the urgency of a better future comes nearer and ~~at~~ this responsibility has been ^{completely} taken ^{care of} by the schools with full pride.

If Youth is the future of a country, then schools are the roads to it and teachers are the driving force!
